

MBDC Celebrates Bark House as First Ever Cradle to Cradle Certified Platinum Product - Hawaii News Now

MBDC Guides Highland Craftsman to achieve Platinum level across all five Cradle to Cradle® categories, marking a milestone in product design and development.

CHARLOTTESVILLE, VA (PRWEB) August 04, 2016

Today, MBDC celebrates the first ever Cradle to Cradle Certified Platinum-level product, Highland Craftsman's Bark House® Poplar Shingle. MBDC worked closely with Highland Craftsman to assess and optimize its product to meet Platinum requirements across all five Cradle to Cradle certification categories, including: material health, material reutilization, renewable energy and carbon management, water stewardship, and social fairness.

Bark House Poplar Shingles are made from reclaimed tree bark. With artisan craftsmanship, Bark House transforms what was once a waste material into an elegant, handcrafted wall covering for exteriors and interiors. The product is maintenance-free, sustainably manufactured, and is fully recyclable at the end of its use.

"Receiving Platinum level under the Cradle to Cradle Products Standard is not an easy feat," said Jay Bolus, President, Certification Services, MBDC. "At the end of our process, Bark House surpassed our expectations for what a product should be. It can fully re-enter both the biological and technical nutrient cycles. Bark House has shown how we can eliminate the concept of waste with their Poplar Shingles, and we are thrilled to share their announcement in achieving the first ever Platinum recognition."

MBDC is a team of material and product consultants and assessors helping design products for the emerging circular economy. Creators of the Cradle to Cradle Design framework, MBDC applies the multi-dimensional approach to sustainable product design created in the Cradle to Cradle Certified Products Program, which is now managed by the independent non-profit Cradle to Cradle Products Innovation Institute.

Highland Craftsman products with Cradle to Cradle certification are eligible as a path to compliance in Options 1 and 2 of the Materials & Resources credit of [LEED v4](#). Bark House Poplar come in standard-grade singles or in a thicker, premium grade that obtain course, deep furrows and a more pronounced shadow line. Sanded interior-grade shingles are also available.
